# Access Port Systems

## Implantation Sites

**Venous access** for repeated intra-venous administration of, for example, chemotherapy, antibiotics and anti-viral drugs, total parenteral nutrition (TPN), blood sampling or transfusion

**Arterial access** for intra-arterial administration of chemotherapy

**Epidural or intra-thecal access** for spinal administration of pain relieving drugs

**Peritoneal access** for loco-regional chemotherapy and (i. e. with Drainaport®) for hydration and drainage of malignant ascites

**Pleural access** for drainage of malignant pleural effusion (MPE)

# Access Ports for venous access

## Celsite® Safety

Venous access ports for extended flexibility without compromise on safety

Celsite® Safety is intended to be used in any condition that requires mid to long-term intermittent or continuous central venous infusions.

The anatomic design with a low profiled nose simplifies the insertion and allows the creation of a small port pocket to minimise the trauma.

### PEEK and titanium combination for maximum safety

### High pressure resistant and CT Marked

Celsite® Safety is resistant to high pressure injection up to 325psi (22.4bar). The radiopaque CT marking enables identification of the port in the X-ray image.

### Safety Port Needle and Safety Puncture Needle with Echogenic Tip

Surecan® Safety II

Safecan™ Safety

# Access Ports for venous access

## Celsite® Epoxy

Premium venous access ports with special compact port design

As the premium access port range of B. Braun, Celsite® Epoxy ports offer outstanding features as well as an extended portfolio of different port sizes and catheters.

They are intended to be used for repeated, intravenous administration of, for example, chemotherapy, antibiotic and anti-viral drugs, parenteral nutrition, blood sampling or transfusion.

Silicone septum for reliable sealing of the puncture

Complete range of silicone and polyurethane catheters with an atraumatic tip, marked every cm

Reliable radiopaque connection ring with anti-kink protection

2 suture holes to facilitate fixation of the port

### Highly compact design

Celsite® Epoxy ports have an extremely low profile and related to the total dimensions of the port a particularly large septum.

### High pressure resistant

The complete range of venous Celsite® Epoxy ports is resistant to high pressure injection up to 325 psi. This enables for power injections of contrast media in radiology, without the need for additional access and needlesticks.

### Radiopaque CT Marking

Celsite® Epoxy offers radiopaque CT marking. With CT marking it is possible to identify the port as resistant to high pressure injection in the x-ray image.

### Extended Portfolio

Available as extra small Brachial- and Babyport®. One of the most compact access ports commercially available.

**Weight:** 3g  
**Internal Volume:** 0.15 mL

\* Gravity flow rates established by gravity infusion of NaCl 0.9%, height 1m. Catheter length 40cm. According to ISO 10555-1.

\*\* With a catheter of 20 cm and Surecan® Safety II. For countries under CE mark only.

\*\*\* With pre-connected catheter.

# Access Ports for venous access

## Celsite® ECG

Venous access ports for accurate ECG guided catheter positioning

- Celsite® ECG allows catheter positioning via intra-atrial ECG detection
- Accurate placement of the catheter tip into the superior vena cava without intraoperative fluoroscopy
- With radiopaque CT marking.

Correct and accurate positioning of the catheter is of high importance to reduce the risk of long term complications.\*

### Accepted

Proven in daily clinical routine and numerous clinical trials.

### Accurate

Celsite® ECG allows accurate placement of the catheter tip.

### Without X-ray

No expensive X-ray equipment needed in almost all cases.  
No X-ray exposure for theatre staff and patients.

### Compatible

Celsite® ECG can be used with any ECG monitor with no need for additional investment.

The Certodyn® Universal Adapter can be ordered by reference 04150228

**Localisation**

- ① Maximal P-wave height is reached and maintained when the catheter enters into the right atrium.

After identifying the area where the P-wave begins to develop its maximal amplitude (which corresponds anatomically to the junction between superior vena cava and the right atrium) advance the catheter a further 2 cm.

- ② This is the final position of the catheter tip with the patient in supine position.

This catheter position allows for the 2-3 cm cranial movement of the catheter tip which occurs when the patient is upright.

**Standard**

**Material:** Titanium | Epoxy  
**Weight:** 8g  
**Internal Volume:** 0.5 mL

**Small**

**Material:** Titanium | Epoxy

# Access Ports for venous access

## Celsite® Discreet

Venous access ports with unique design for enhanced port stability and better cosmetic results

Celsite® Discreet offers unique design and allows better cosmetic results for the patient.

- The low profile design with patented 90° connection provides a high level of discretion
- Also available in small size to facilitate implantation in paediatric and underweight patients
- MR conditional, Latex, DEHP and PVC free
- With radiopaque CT marking.

### Prevention of Port Flip

Patented 90° angle of the exit cannula reduces the risk of port flip and associated blockage due to catheter kinking

### Better Cosmetic Results

The surgical incision can be made vertically and placed laterally following the subcutaneous traction lines

### High pressure resistant

The complete range of venous Celsite® Epoxy ports is high pressure resistant up to 325 psi. This enables for power injections of contrast media in radiology, without the need for additional access and needlesticks.

### Radiopaque CT Marking

Celsite® Epoxy offers radiopaque CT marking. With CT marking it is possible to identify the port as high pressure resistant in the x-ray image.

# Access Ports for venous access

## Celsite® PSU

Venous access ports for mid to long-term venous applications

Celsite® PSU ports are the standard venous access port range for any condition that requires mid to long-term intermittent or continuous central venous infusions.

This might include chemotherapy, antibiotic and anti-viral drugs, parenteral nutrition, blood sampling or transfusion.

Celsite® PSU has a polysulphone body with a titanium chamber and is high pressure resistant up to 325 psi (22.4 bar).

- Anatomic design and lower profiled nose for simplified insertion and patient comfort
- Available in standard and small size
- 3 suture holes to facilitate fixation of the port
- Large range of silicone and polyurethane catheters
- The radiopaque catheter is graduated from 5 cm in order to facilitate an easy, precise and reliable implantation
- MRI-conditional, Latex, DEHP and PVC free
- Resistant to high pressure injection up to 325 PSI (22.4 bar)

Catheter	OD (F/mm)	ID (mm)	Length (mm)	Flow rate* (ml/min)		325 PSI Recommended maximum flow rates (mL/s) Contrast media at 37°C (325 psi = 22.4 bar)**						Implantation technique	Type	Reference	Accessories see page 32/33

\* Gravity flow rates established by gravity infusion of NaCl 0.9%, height 1m. Catheter length 40cm. According to ISO 10555-1.

# Access Ports for venous access

## Celsite® Double Port

Specialized venous access ports with two separate port chambers for simultaneous infusion

- For simultaneous infusion of e.g. incompatible drugs
- For infusion with high flow rates by using both lumina
- Administration of continuous infusion and bolus injection
- Alternating puncture sites
- Profiled shape to be easily placed in a small pocket
- Small size facilitates implantation in paediatric and underweight patients
- Off-set silicone catheter tip ensures that no mixing of drugs occurs at the catheter tip
- With radiopaque CT marking.

 \*\* With a catheter of 20 cm and Surecan® Safety II. For countries under CE mark only.

# Celsite® Valved

Venous PSU access ports with valved catheter tip

- For chemotherapy, administration of antibiotics, parenteral nutrition and blood sampling
- Allows easy infusion and aspiration
- Anti-Reflux radiopaque silicone catheter
- Distal 3-way valve

Conditions:

# Access Ports for arterial access

## Celsite® Arterial

For loco-regional chemotherapy of liver tumours and hepatic artery infusion therapy (surgical implantation technique)

- For loco-regional chemotherapy of liver tumours and hepatic artery infusion therapies
- The access port is implanted at the base of the ribs, while the catheter is introduced into the *arteria gastroduodenalis* so that the catheter tip is located in the *arteria hepatica*
- The radiopaque silicone catheter has three rings to facilitate immobilisation of the catheter in the artery

### Accessories:

Every Access Port kit contains

- 2 Straight Surecan® needles 22G x 30 mm
- 1 vein lifter

Catheter	Access Port	OD (F/mm)	ID (mm)	Length (mm)	Flow rate* (ml/min)		Implantation technique	Type	Reference

**Internal Volume:** 0.33 mL

\* Gravity flow rates established by gravity infusion of NaCl 0.9%, height 1m. Catheter length 40cm. According to ISO 10555-1.

\*\* Polyurethane catheter with two rings.

# Celsite® Anthron® Arterial

For loco-regional chemotherapy of liver tumours via a heparin covered polyurethane catheter (percutaneous implantation technique)

- The Anthron® catheter is specially designed for percutaneous access via the femoral or axillary artery. The catheter tip is fixed in gastroduodenal artery and the chemotherapy is administered through the side hole into the hepatic artery (HAIT).
- Anthron® is a hydrophilic polyurethane catheter to which heparin is ionically bound. It is particularly indicated to help prevent catheter occlusion and catheter-related thrombosis.

### Accessories:

Every Access Port kit contains

- 1 tunneling rod
- 1 vein lifter
- 2 Straight Surecan® needles 22G x 30 mm
- 1 Winged Surecan 20G x 20 mm

**Weight:** 4.7 g  
**Internal Volume:** 0.25 mL

\* Gravity flow rates established by gravity infusion of NaCl 0.9%, height 1m. Catheter length 40cm. According to ISO 10555-1.

# Access Ports for peritoneal access

## Celsite® Peritoneal

For loco-regional chemotherapy of peritoneal metastases and ovarian cancer

Peritoneal Access

- For loco-regional chemotherapy of peritoneal metastases and ovarian cancer
- The access port is implanted at the base of the ribs and the catheter is placed at the required location inside the abdominal cavity
- The radiopaque silicone catheter with multiple perforations enables enhanced diffusion of infused drugs and reliable patency of the catheter

### Accessories:

Every Access Port kit contains

- 2 Straight Surecan® needles 22G x 30 mm
- 1 vein lifter

The implantation accessories kit AP16F can be ordered separately (Reference 4430493; see page 33).

**Internal Volume:** 0.5 mL

\* Gravity flow rates established by gravity infusion of NaCl 0.9%, height 1m. Catheter length 40cm. According to ISO 10555-1.

# Access Ports for pleural access

## Celsite® DRAINAPORT

For intra-peritoneal administration of chemotherapy, drainage of malignant ascites, or drainage of malignant pleural effusion

- For intra-peritoneal administration of chemotherapy, hydration, drainage of malignant ascites, or drainage of malignant pleural effusion
- Helps to avoid repeated, painful puncture for drainage
- Improves quality of life and is an easy and effective solution for home care treatment
- Celsite® DRAINAPORT can be implanted percutaneously or by surgical cut-down technique
- **Catheter cuff** promotes tissue ingrowth to reduce infection risk and holds the catheter in place
- **Connection** is enabled by the radiopaque titanium connection ring
- **Silicone septum** for reliable puncture
- **Anatomic design** with delta shape profile, light weight and easy to suture
- Smooth, large and flexible **multiperforated silicone catheter** with 49 oval holes (Ø 1.1 x 1.6 mm) from the tip up to 20 cm to prevent blockage of the catheter and enhance efficiency

Pleural Access

Catheter	OD (F/mm)	ID (mm)	Length (mm)	Flow rate* (ml/min)		Implantation technique	Type	Reference

### Accessories:

Every Access Port kit contains

- 2 Straight Surecan® needles 22G x 33 mm

The implantation accessories kit AP16F can be ordered separately (Reference 4430493; see page 33).

B. Braun Drainage Kit is separately available. It contains:

- 1 Pleuracan® double anti-reflux valve
- 1 Secretion bag 2.0l
- 1 Combifix® male/male Adapter

Reference: 5021571

### Standard

**Material:** Titanium | Epoxy  
**Weight:** 10g  
**Internal Volume:** 0.5 mL

\* Gravity flow rates established by gravity infusion of NaCl 0.9%, height 1m. Catheter length 40cm. According to ISO 10555-1.

# Access Ports for spinal or epidural access

## Celsite® Spinal

For spinal administration of pain relieving drugs

- For spinal administration of pain relieving drugs
- The catheter is tunneled under the skin to the access port, which is implanted at the base of the ribs
- Light weight and comfortable
- Profiled shape design facilitates insertion
- Integrated titanium filter prevents the passage of particles

### Catheter

Every Access Port kit contains 2 catheters:

- 1 multiperforated closed tip polyamide catheter (PA)
- 1 open tip polyurethane catheter (PUR) with a Teflon®-coated guide wire

Catheter	OD	OD (mm)	ID (mm)	Length (mm)	Flow rate* (ml/min)		Implantation technique	Type	Reference
					19G	22G

PUR and PA	20G	0.86	0.45	1000	1	1	spinal/epidural	ST304-20	04430097

### Accessory kit:

- Screw connector (2x)
- Spanner
- Anti-kink device (2x)
- Tunneling rod
- Winged Surecan® needle 20G x 20 mm
- Omnifix® syringe 10 mL
- Perican® Tuohy needle 16G (ST304-19) or Tuohy needle 18G (ST304-20)
- Perifix® 0.2 µm filter
- Scalpel size 10 and 11
- Sterican® needle 20G x 70 mm
- Perifix® LOR syringe
- Straight Surecan® 22G x 30 mm (2x)

### Standard

**Material:** Polysulphone | Titanium-Filter  
**Weight:** 6g  
**Internal Volume:** 0.33 mL

\* Gravity flow rates established by gravity infusion of NaCl 0.9%, height 1m. Catheter length 40cm. According to ISO 10555-1..

# MR Compatibility and High Pressure Resistance

## Celsite®

Spinal or Epidural Access

### MR-Conditional

Non-clinical testing demonstrated that Celsite® Access Ports and Surecan®/Cytocan® port needles (including Safety II) are MR Conditional. A patient with these devices can be scanned immediately after placement under the following conditions:

- Static magnetic field of 3-Tesla and 1.5-Tesla
- Maximum spatial gradient magnetic field of 710 Gauss/cm or less
- Maximum whole body averaged specific absorption rate (SAR) of 2.9 W/kg for 15 minutes of scanning

MR image quality may be compromised if the area of interest is in the exact same area or relatively close to the position of the devices. Therefore, optimization of MR imaging parameters to compensate for the presence of these devices may be necessary.

Please see instructions for use for general information and information on MRI-related heating.

### Pressure Resistance

All venous Celsite® Access Ports with titanium chamber or a titanium plate are resistant to high pressure injection up to 325 psi / 22.4 bar (except for valved catheters and Celsite® Implantofix).

Please see instructions for use for detailed device information regarding high pressure injection.

### Material

All Celsite® Access Ports are latex-, PVC- and DEHP-free. All Surecan®/Cytocan® needles are latex- and DEHP-free.

# Safety Access Port Needles

## Surecan® Safety II

High pressure resistant non-coring safety needle for access ports

Surecan® Safety II is the power injectable access port needle with an easy to use safety mechanism for reduced risk of needlestick injuries.

The small size and innovative design of Surecan® Safety II enables comfort for both clinicians and patients, either in hospital or for home care treatment.

### User safety

Intuitive safety mechanism for reduced risk of needlestick injuries

### Patient comfort

Low profile and foam pad for better patient comfort

### Handling

Flexible and ergonomic wings for reliable handling

### Power injections

Suitable for power injections up to 325 psi

For more information on the risks and prevention of needlestick injuries:

[www.safeinfusiontherapy.com](http://www.safeinfusiontherapy.com)

### Easy removal

- 1 Stabilise the needle base on the port
  - 2 Firmly pull the wings up until you hear a "Click"
- Green dot and audible click clearly indicate the safety mechanism was executed
  - Non-absorbant closed-cell foam pad of the patient plate
  - MR conditional, Latex and DEHP free

# Access Port Needles

## Winged Surecan® | Cytocan®

### Winged Surecan® non-coring needle

- use for long-term infusions

# Peripherally Inserted Central Catheters (PICC)

## Celsite® PICC-Cel

Peripherally Inserted Central venous polyurethane Catheter for short to long-term drug infusion therapy

### ■ For short to long term central venous access

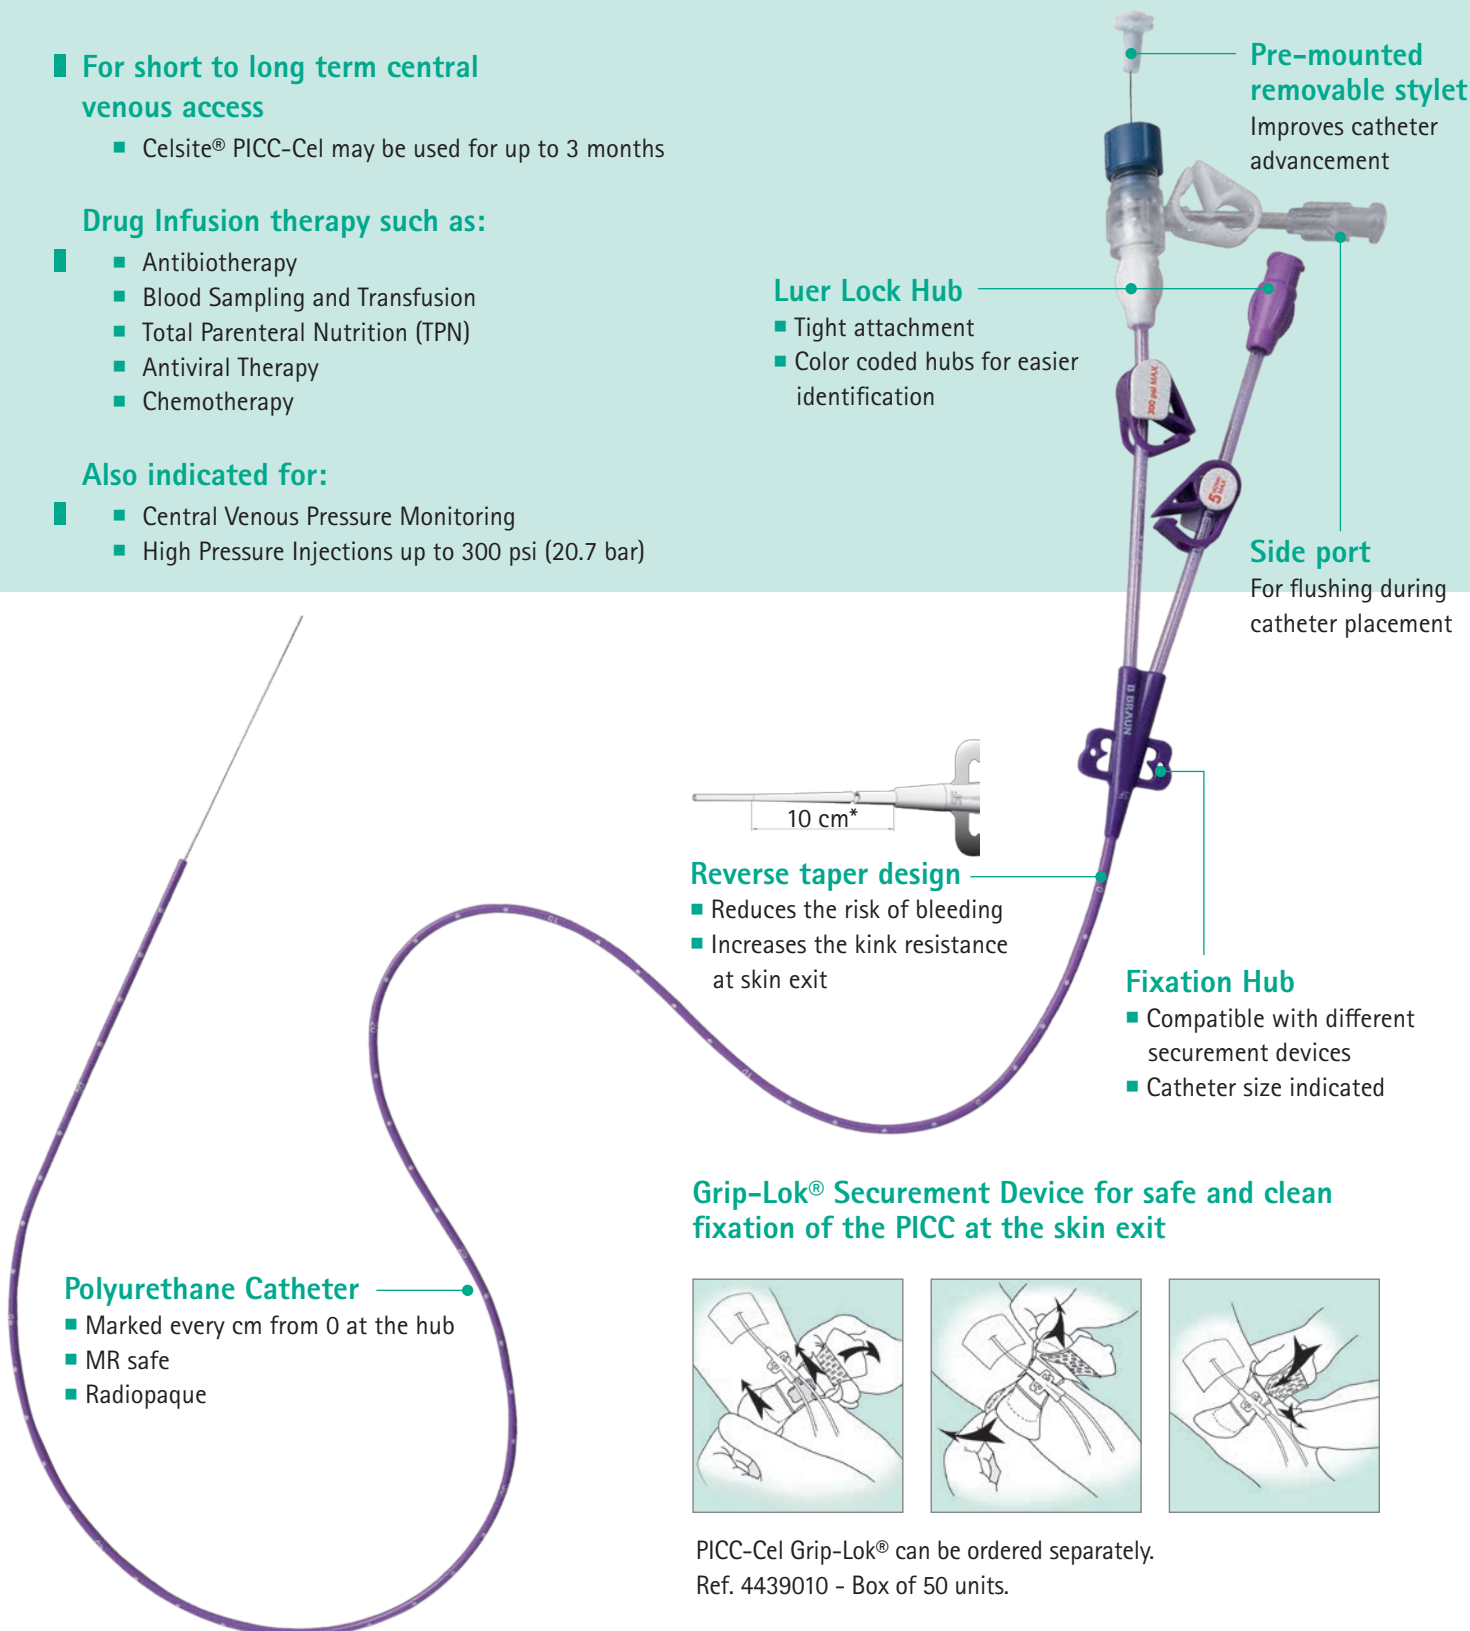

- Celsite® PICC-Cel may be used for up to 3 months

### Drug Infusion therapy such as:

- Antibiotherapy
- Blood Sampling and Transfusion
- Total Parenteral Nutrition (TPN)
- Antiviral Therapy
- Chemotherapy

### Also indicated for:

- Central Venous Pressure Monitoring
- High Pressure Injections up to 300 psi (20.7 bar)

**Pre-mounted removable stylet**  
Improves catheter advancement

**Luer Lock Hub**  
■ Tight attachment  
■ Color coded hubs for easier identification

**Side port**  
For flushing during catheter placement

**Reverse taper design**  
■ Reduces the risk of bleeding  
■ Increases the kink resistance at skin exit

**Fixation Hub**  
■ Compatible with different securement devices  
■ Catheter size indicated

**Polyurethane Catheter**  
■ Marked every cm from 0 at the hub  
■ MR safe  
■ Radiopaque

### Grip-Lok® Securement Device for safe and clean fixation of the PICC at the skin exit

PICC-Cel Grip-Lok® can be ordered separately.  
Ref. 4439010 - Box of 50 units.

## Celsite® PICC-Cel Implantation Accessories – Safe and Comfortable Handling

21 G x 70 mm echogenic safety puncture needle for needle tip location via ultrasound

Stainless steel guidewire & nitinol guidewire, available in 45 cm and 130 cm

Safety scalpel E11

Grip-Lok® Securement Device

Caresite® needleless access connector

10 ml Omnifix® Luer Slip syringe

4.5 F, 5.5 F, 6.5 F x 7 cm peelable introducer for better peripheral access

Tape measure for catheter measurement and trimming

	Celsite® Standard						

Recommended maximum pressure (CT function) - 325 psi (22.4 bar)

Flow rates may vary depending on temperature of contrast media and length of the implanted catheter.

Flow rates established with a catheter of 20 cm.

For flow rates of Surecan® Safety II, please refer to concerned Access Port product pages.

# Customized Add-on kits Access Ports

B. Braun offers individual add-on kits which contain an organized array of disposable components for your specific port implantation procedure.

B. Braun customised add-on kits save procedural time since they facilitate a quick and easy setup and cleanup.

B. Braun customised add-on kits are cost effective by simplifying your purchasing and accounting procedures and by consolidating components in one affordable kit.

## B. Braun customised add-on kits mean:

- Custom made kit solutions
- All components in one kit
- Less preparation time
- More time for the patient
- Compact storage size
- Reduced waste volume
- Known and same quality
- One supplier contact

### Access Port Systems and PICC

Treatment of patients often requires long-term vascular access e.g. in oncology, haematology, internal medicine. With its variety of different products, models and designs, Vascular Systems offers a complete line of highly effective and safe products to cover individual patient needs.
